54.	For Instructor client, after a choice is deleted, it still shows in the saved test.	1
55.	For Instructor client, in creation of a programming question, if you do not add a file for that question and click “save as”, a warning appears saying “you must enter a file name for this question” but then the program lets the user to save anyway	1
56.	For Instructor client, in creation of a programming question, if you do not add a file for that question and just go to another question and save the test, the program lets you to save.	1
57.	For Instructor client, in creation of a new question, the question does not appear in the questions list	2
58.	For Instructor client, in creation of a programming question, there is no button letting the user to choose a file for that question.	2
59.	For Instructor client, in creation of a multiple choice question, if there is no choices, users are still able to use “save” function	2
60.	For Instructor client, in creation of a multiple choice question, if there is no choices, users are still able to user “save as” function.	2
61.	For Instructor client, in creation of a multiple choice question, if you go to another question and come back, the “answer” box	1

	becomes empty.	
62.	For Instructor client, in creation of a short answer question, if you go to another question and come back, the “answer” box becomes empty.	1
63.	For Instructor client, in creation of a programming question, if you go to another question and come back, the “answer” box becomes empty.	1
64.	For Instructor client, if you create a new programming question, enter something in the “File” box, and then click “new” button under “Test” bar, the string you entered is still there in the “File” box.	3
65.	For Instructor client, on the properties panel, after the “X” button is clicked, the panel doesn’t disappear.	2
66.	For Instructor client, on the properties panel, the “X” serves as “apply” instead of “cancel”.	2
67.	For Instructor client, answers are not saved with “save” function.	1
68.	For Instructor client, answers are not saved with “save as” function.	1
69.	For Instructor client, when trying to edit an existing file, the points possible box becomes empty.	2
70.	For Instructor client, 0 is a valid number for points possible.	2

71.	For Student client, after the “Exit Test” button is click, it pops up a window to promote users to open a test.	1
72.	For Student client, no button is indicating that it is used to open a test.	2
73.	For Student client, “Previous” and “Next” button is shown before users opening a test.	2
74.	For Student client, when try to open a test created by the instructor client, it shows “Please enter both a first and last name” error message even first and last name are all entered correctly.	3
75.	For Student client, nothing is responding after the submit button is clicked.	1
76.	For Student client, it cannot open a test with just only one question.	1
77.	For Student client, after a selection is made for multiple choice question, when “Next” or “Previous” button is clicked, exception is thrown.	1
78.	For Student client, after a test is opened, when there are only two questions, it jumps to the last question in the test.	2
79.	For Instructor client, you cannot go to another question using the index number selection bar.	2
80.	For Instructor client, after deleting a question, the index is	3

	still there in the index selection bar.	
81.	For student client, when input space into first name field, system does not find out the error	2
82.	For student client, when input space into last name field, system does not find out the error	2
83.	For student client, after submitting the test file, the system directly display the second question rather than the first question	3
84.	For student client, in the question screen, once click the previous button then next button, the page will become last page for submit	3
85.	For the student client, need to click twice "exit test" button to get the open window	3
86.	For student client, when finish the test and enter in the screen of Thank, all the "open test" button cannot work	3
87.	For student client, when click "next button" in the last page, the system will crash	1
88.	For student client, in the second page, click the "previous" button and "next" button and "previous" button, the submit button will appear in the first page	1
89.	For student client, no matter	2

	what input in the programming question, the compile wil show that "cannot run program"	
90.	For student client, in the question page, once click "previous" then "next" then "previous", the system cannot back to the next page	2
91.	For student client, if the test only has two questions, when click "next" button, the system will crash	3
92.	For student client, if the test only has two questions, there is no submit button	1
93.	For student client, if the test has more than three question,s after finish the last question, it cannot be submitted	2
94.	For student client, if the test has only one question, the test file cannot be opened	1
95.	For student client, if the test just has two short answer, when the input the answer in the first question then click "next" button, the answer will appear in the text field of question two	3
96.	For student client, if the test just has two multiple choices, when the input the answer in the first question then click "next" button, the answer will appear in the text field of question two	2
97.	For student client, in whatever test file, the point	2

	always show 25	
98.	For student client, input first name not input last, the system can get into the test screen	3
99.	For student client, if the test has 5 questions, the system just shows question one, two four, and the order is wrong	1
100.	For student client, if the test has more than 5 questions, the questions appear with wrong relevant kinds answer	1
