Instruction to run the executable

For client side:
Once you have the apk file, please connect the android phone to the computer of start the emulator, and run

```
adb install appname.apk
```

To uninstall the apk

```
adb uninstall appname.apk
```

from command line.

For source code of client side:
Please import to the Eclipse as the following instruction:

File > Import > Android > Existing Android Code into Workspace

And then go to the directory of source code.

For server part:
The server folder contains:
Command.java
gcm-server.jar
Connector.java
MessageToClient.java
json-simple-1.1.1.jar
Provider.java
mysql-connector-java-5.0.8-bin.jar
ProviderHandler.java

Firstly, open the terminal and ssh lore. And cd to the server folder and write the following command:

rm *.class

javac -cp mysql-connector-java-5.0.8-bin.jar:gcm-server.jar:json-simple-1.1.1.jar:. Provider.java Command.java Connector.java

java -cp mysql-connector-java-5.0.8-bin.jar:gcm-server.jar:json-simple-1.1.1.jar:. Provider

Then you can see the receiving and sending things of server.
